

HARVESTERS

1000 MMM THRESHING MACHINE

Petrol Engine

Electric Motor

Diesel Engine

The 1000 MMM model works on the same principal as the 170 model, but is more compact and easier to move around even on the back of a pick-up truck. This model is ideal for sustainable farmers in rural areas. The machine is available in an electric driven, petrol or diesel engine driven. It can be operated anywhere without having a tractor available. Cleaned crop falls through the standard fitted threshing drum's concave sieves surrounding the cleaning rotor into a bag.
